

Orangeburg Prep is proudly recognized as a certified Science, Technology, Engineering, Arts, and Math (STEAM) school by the South Carolina Independent School Association (SCISA). This certification reflects the school's adherence to SCISA's stringent STEAM standards, which emphasize creating an inquiry-based learning environment. This environment nurtures students' problem-solving abilities, encourages both independent and collaborative work, and promotes the development of creative and critical thinking skills.

The standards require students to use technology for research and hone their oral and written communication skills to clearly convey their conclusions. STEAM activities are woven into the curriculum, offering hands-on experiences that enrich and support teaching methods. Students across all academic disciplines in preschool through twelfth grade actively engage in these STEAM activities.
